

Ticket ID	Alert Message	Severity	Details	Ticket status
A-2703	SERVER-MAIL Phishing attempt possible download of malware	Medium	The user may have opened a malicious email and opened attachments or clicked links.	Escalated ▾

Ticket comments
Since the severity of the alert is medium, by the playbook we need to check the content of the potential phishing attempt. We see that the email sender's address is suspicious (76tguyhh6tgfrt7tg.su), the content has some grammar errors, and most importantly - the mail contains an attachment, therefore, we also need to verify if the file hash is malicious or not. This can be done by passing the hash value into virustotal search - where we can see that the "54e6ea47eb04634d3e87fd7787e2136ccfbcc80ade34f246a12cf93bab527f6b" is a known trojan file, hence, we confirmed that the alert was indeed a true positive and we escalate the ticket status to L2 SOC analyst.

Additional information

Known malicious file hash:

54e6ea47eb04634d3e87fd7787e2136ccfbcc80ade34f246a12cf93bab527f6b
